DETAILED ACTION

Allowable Subject Matter

1. Claims 1-13 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Re claim 1, the independent claim includes "wherein the first tubular element is in fluid communication with a control valve, the control valve being selectively operable to fluidly connect said first tubular element with one of the aspiration side or said delivery side of the compressor; and wherein the second tubular element is in fluid communication with the delivery side of said compressor through a reservoir, the second tubular element being throttled in such a way to accelerate the gaseous fluid flowing through it and, at the same time, to allow an accumulation of the gaseous fluid upstream within said reservoir, wherein in an aspiration condition, the gaseous fluid is aspirated through the first tubular element and is partially re-injected through the second tubular element and partially accumulated by the reservoir, and in a back washing condition, the accumulated gaseous fluid is released by the reservoir through the first tubular element by selective activation of the control valve means." in combination with the remaining claim limitation is not taught and/or made obvious by the prior art. **See remarks, pages 1-3, received on 4/13/09.**

Re claim 11, the independent claim includes "a vacuumeter connected to the first tubular element of the probe and a manometer connected to the second tubular element of the probe for monitoring the operation conditions of the probe; wherein said aspiration means and the re-injection means share compressor means, said compressor means

Art Unit: 2856

having an aspiration side and a delivery side, wherein the first tubular element is fluidly connected to control valve means operable to fluidly connect said first tubular element selectively with one of the aspiration side and said delivery side of the compressor means; and wherein the second tubular element is disposed in fluid communication with the delivery side of said compressor means through a reservoir, the second tubular element being throttled in such a way to accelerate the gaseous fluid flowing through it and, at the same time, to allow an accumulation of the gaseous fluid upstream within said reservoir” in combination with the remaining claim limitation is not taught and/or made obvious by the prior art. **See remarks, pages 1-3, received on 4/13/09.**

Re claim 12, the independent claim includes “re-injecting a first portion of the gaseous fluid into the process environment through the second tubular element of the probe, accumulating a second portion of the gaseous fluid; performing a back washing step, wherein the accumulated gaseous fluid is released into the process environment through the first tubular element.” in combination with the remaining claim limitation is not taught and/or made obvious by the prior art. **See remarks, pages 1-3, received on 4/13/09.**

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
